	Y	25	25
C	X	99	125
	Y	25	25

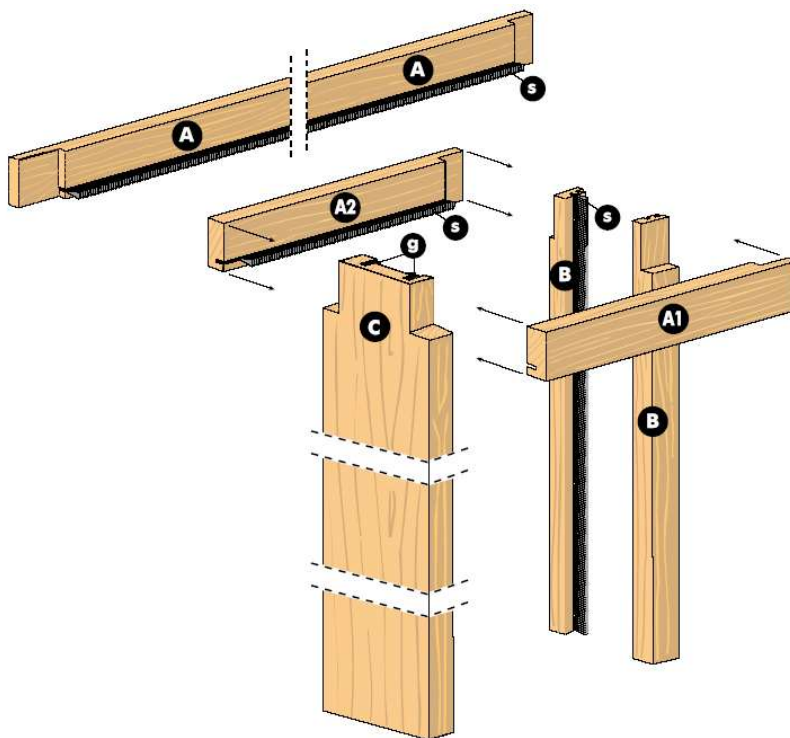

## JAMBS - FOR FINISHED WALL THICKNESS 100 OR 125MM

Along with the metal frame we supply also the finishing joinery kit sometimes called the jamb kit\* This is what makes the finished product into beautiful and professionally finished sliding door. The kit includes the vertical wooden jambs that cover the leading edges of the pocket and the top horizontal jambs that cover the top of the door/brackets for a beautiful finish.

Both of these are supplied with brushes that attach to the jambs and project towards the door to give a good finish towards the internal pocket. Apart from double door installations where it is not needed, we also supply a recessed wooden doorpost. As the door closes onto the doorpost it enters slightly into the doorpost. This ensures that there is a clean and vertical closure line and that there are no unsightly chinks of light that you would have with a flush doorpost.

We also supply full-length rubber bumpers for the internal angles of the recessed doorpost, these allow you to close the door quietly without the drama of wood banging against wood. The jambs are made from finger jointed pine with a real wood tanganika walnut (sometimes called cherry walnut) veneer that is unfinished and ready to accept a stain, paint or varnish.

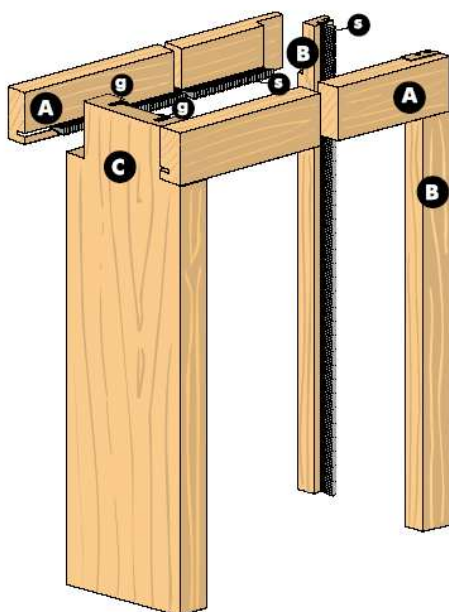

\*NOT REQUIRED FOR THE SYNTESIS SYSTEM

- (A) Top horizontal jambs\*\*
- (B) Vertical pocket jambs
- (C) Wooden door post
- (s) Brushes
- (g) Rubber bumpers

\*\*Supplied in one piece to be cut as required
